

# Manual for testing and assembly

## Vision Kit Content

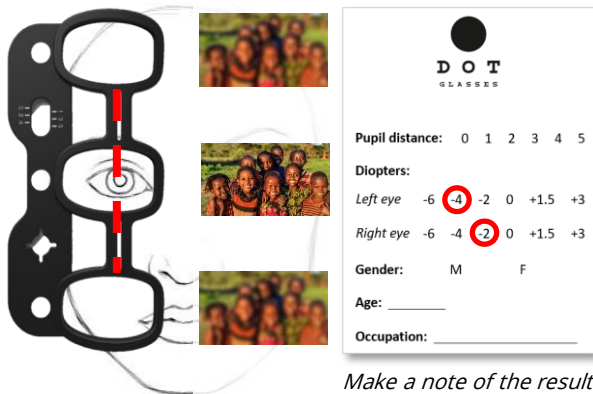

2 vision testers and a pupil distance tool

Eyeglasses parts + mix of lenses

1

**Test each eye with both long and short distance tester**

Make a note of the result

2

**Measure pupil distance (PD)**

Examples: PD 0 = skip step 3. PD 2 = cut 2 pieces from the nose bridge of both eye frames

3

**Cut the number of nose bridge segments based on the PD (2x)**

Flat side of the cutters towards the frame

4

**Click temples to the eye frames (2x)**

5

### Push in lenses (2x)

- Align oval side of the lens to the inside of the frame
- Put lens flat on the frame from the front
- Start on bottom outer corner – push lens inside
- Go counter clockwise and push lenses inside
- Do final push & click on the bottom inner corner

6

### Push the eye frames together

Connect *without* leaving a space  
A distinct *click* sound means a good connection

7

### Slide left and right ear hooks in

8

### Clean lenses with a microfiber cloth

9

### Final product: Custom-made glasses
